

MATTHEW TOPHAM

AI Systems Architect | Full-Stack Software Engineer

Boulder, CO | (805) 729-3307 | thetopham@gmail.com | github.com/thetopham | linkedin.com/in/mrtopham

SUMMARY

AI systems architect and full-stack developer building interactive AI products, persistent world systems, and multimodal storytelling pipelines. Active Marinara Engine developer with 100+ merged pull requests across React/TypeScript, Node.js, capability APIs, transactional state, AI generation, responsive UI, and production validation.

EXPERIENCE

Pasta Devs | Marinara Engine

2026 - Present

AI Systems Architect & Open-Source Developer | Remote

- Authored 100+ merged pull requests spanning React/TypeScript UI, Node.js services, shared contracts, downloadable capability APIs, transactional persistence, prompt orchestration, documentation, and automated tests.
- Architected hierarchical world-state infrastructure with nested locations, graph validation, bounded prompt context, AI drafting/expansion, lore grounding, snapshots/checkpoints, revision conflict handling, and responsive map authoring.
- Built reliable movement workflows using atomic owner turns, idempotent command IDs, server-owned route validation, retry/recovery semantics, and stream/persistence sanitization for hidden model directives.
-
