

Matthew Topham

Software Developer | AI & Creative Tools

Boulder, Colorado | thetopham@gmail.com

thetopham.github.io | github.com/thetopham | linkedin.com/in/mrtopham

Computer science student at CU Boulder building AI tools for roleplay animation, wearable memory, and everyday help. I develop the apps, services, and tests behind these projects.

OPEN-SOURCE EXPERIENCE

Marinara Engine + Agents | Pasta Devs

Open-Source Developer | 2026-Present | Current animation workflow in development

- Contributed 100 merged pull requests across Marinara Engine (68) and Agents (32), covering the app, server, story tools, and automated tests.
- Built tools for World Maps, reusable character and location images, and keeping track of people and places as a story develops.
- Currently developing a MiniMax H3 / ComfyUI workflow to turn roleplay narration into animation, using character sheets, written personas, location references, storyboards, keyframes, and motion instructions.

Selected work: animation | World Maps | agent tools

PERSONAL PROJECTS

Manfred | Wearable AI memory

Creator | 2026 | Prototype

- Built an Android/Flutter companion and Python services to turn Omi wearable audio into daily transcripts and searchable notes.
- Connecting E09 smart glasses to ChatGPT Live for voice and photo sharing through phone automation; voice works, while photo reliability is still being improved.

Demerzel | Daily briefs, a personal wiki, and a home AI fleet

Creator | 2026

- Built tools for daily AI briefs, a personal wiki organized from daily conversations, and management of local AI computers.
- Manage an AMD Radeon AI PRO R9700 system, a dual RTX 3060 system, and a single RTX 3060 system for local AI models, animation experiments, and ComfyUI image generation.
- Developed controls to check running programs, start or stop supported jobs, and keep them from competing for the same graphics card. Separate automatic coding/research workers are currently paused.

School of the Ancients | Learning through conversation

Built web and VR learning prototypes where people explore ideas through conversations with AI historical mentors.

TECHNICAL SKILLS

Python, TypeScript, JavaScript, SQL, React, Node.js, Flutter, Linux, Docker, GitHub Actions, Playwright, ComfyUI; app/server development and automated testing.

EDUCATION & CERTIFICATION

University of Colorado Boulder - B.A. Computer Science, expected May 2027

Front Range Community College - A.S. Computer Science, 2025

NVIDIA-Certified Associate - AI Infrastructure & Operations, August 2025
